Title: PUSH AND PULL HANDLES FOR WALKERS

Abstract:

The push and pull handle for walkers is a mechanical device consisting of a "U" shaped handle, a single "L" or "J" shaped handle or a club having an "S" type handle linked to a wheeled walker by one or two adjustable or folding anchor points. The device is used as a pull or push handle when attached to a geriatric walker often consisting of four wheels, two handles, brakes and a seat. The device enables a person to push or pull a person seated on the walker seat.
